CANADIAN AGRICULTURE

Edward McKyes

Editor, Canadian Agricultural Engineering

A great number of CSAE members have been and are still involved in development and design projects overseas. The locations of these projects range from quite well-developed countries to those which are very poor, and the area of application of these projects varies from systems of irrigation and drainage, crop storage, machinery development and soil conservation to practically all the areas normally encompassed by Agricultural Engineering and Food Engineering. Yet we see very few papers in our journal describing these projects.

Certainly, technical subjects germane to Canadian conditions are of more interest to most agricultural engineers who read our journal. But, if one adds up the number of our members who have considerable international experience, the total is very large, and includes those from universities, government agencies and private companies. In the years to come, a great many of our young agricultural engineers and future graduates will be involved in projects overseas. It would be of great benefit to them and to more experienced persons to read of others' experiences in research and design in foreign lands. Information could be exchanged between those now working overseas, and background technology and history could be provided for novice travellers if articles appeared in Canadian Agricultural Engineering.

I know personally of at least twenty interesting and comprehensive research and/or system design projects which have been carried out overseas by our members just in the past decade. I encourage those who have been involved in such projects to write them up (in the approved style of course) and submit them to our journal. There is no doubt that they would be of immense interest and value to most of our readership, and would add another dimension to the mix of subjects which is currently provided by *Canadian Agricultural Engineering*.

Canadian Agricultural Engineering publishes papers covering the general field of Agricultural Engineering that fit into one of the following classifications: (1) a scientific paper based on original research; (2) a technical paper based on design, development, testing, or analysis of machines, equipment, structures, processes, or practice; (3) a general paper on education relative to curricula and philosophy or trends in science, on a survey or investigation of some phase of research or research methods, or on extension or extension methods. The Editorial Board may also publish abstracts published elsewhere and interesting news items from members of Agricultural Engineering.

Manuscripts for publication should be submitted to the Editor. The papers must be original and must have not been published elsewhere or copyrighted. The author, not the CSAE, is responsible for opinions expressed. Information published in *Canadian Agricultural Engineering* may be quoted in whole or in part provided that credit is given to the author and to the journal. Publication charges are \$40/page plus cost of illustrations etc. and reprint charges are [\$10.00 + (number of sets of 100 reprints ordered × \$3.00/100 reprints)] × (number of pages per reprint).

Central Office Address: Suite 907, 151 Slater Street, Ottawa, Ontario K1P 5H4
Published Semi-Annually (January and July)

Subscription rate: \$30.00 per annum, single issue \$17.00

ERRATUM

Canadian Agricultural Engineering
Volume 29, no. 2, pp. 137-142

SUBSURFACE IRRIGATION AND DRAINAGE ON A SANDY SOIL IN SOUTHERN QUEBEC

The name of the first author of this paper was misspelled. The correct citation appears below.

N.A. Memon, B. von Hoyningen Huene, J. Gallichand, and
R.S. Broughton.

Our apologies to the authors.

NOTES TO CONTRIBUTORS

The Editorial Board will assess suitability and essential detail of papers submitted for publication in *Canadian Agricultural Engineering*. One or more reviewers will be used. Their comments and suggestions will be compiled and submitted to the author. The review will ensure that:

1. A *research paper* presents a piece of research carried to a well-defined stage of advancement and the conclusions are adequately supported by the experimental results.
2. A *technical paper* presents a clear, concise, and factual outline and interpretation of the development, design, test, or analysis under consideration and that it is a contribution in the field of agricultural engineering.
3. A *general paper* on education, research, or extension is pertinent to major changes in curriculum, research, or extension or to forward-looking developments in these areas.
4. A *technical note*, of one journal page or less, on equipment development, technique of measurement, or method of analysis will have an application for other workers in the field of agricultural engineering.

MANUSCRIPT

The manuscript should be typed double-spaced on paper $8\frac{1}{2} \times 11$ inches (21.6×27.9 cm) with margins not less than $1\frac{1}{4}$ inches (3.3 cm). The first page should contain only the title, authors' names, addresses (including postal codes), and contribution number where applicable. Tables and captions for illustrations should be on separate pages, placed after the text. Manuscript paper with numbered lines is preferred. The original and two copies are required.

The title of the paper should be capitalized and centered on the page; it should give an accurate description of the article, using key words that can be used for computer-indexing.

ORGANIZATION

This paper should be organized to conform with present Journal practice. *Research* and *Technical* papers must include a short abstract section of about 200 words.

Major headings — Center on the page with all words in capital letters.

Subheadings — Start at left-hand margin, capitalize first letter.

Sub-subheadings — Start at left-hand margin, in lower case except first letter of first word, and underline.

Technical and detailed information should be included only in the form of description, table, graph, chart or photograph. In general, follow the *Council of Biological Editors Style Manual*, 5th ed., published by the Council of Biology Editors, Inc., Bethesda, MD 20814.

References

List references alphabetically by authors at the end. Include year of publication, title in lower case except first letter of first word, and source, with volume and page numbers where applicable. Names of periodicals should be abbreviated in the form given in *BIOSIS List of Serials with Title Abbreviations* (Bioscience Information for Service of Biological Abstracts, 211 Arch Street, Philadelphia, PA, 19102). Material in press, with the name of the journal, may be used as a reference. Private communications and unpublished reports should be referred to in parentheses in the text. Avoid the use of footnotes. Use the author-date system in the manuscript when referring to articles in the Reference section.

Tables

Designate tables at the top by table number (Roman numerals) and title, in upper and lower case letters. All headings and other information in tables are to be in lower case except first letter of first word. Keep the table compact and place it across the page wherever possible. Do not use vertical lines.

Measurements

Use the metric system (SI) in the text. Tables, charts and graphs should be given only in metric units.

Equations

Equations and formulas must be set up clearly. Use capitals for symbols as much as possible and lower case for superscripts and subscripts. Greek and other characters should be identified clearly. Equations should be numbered on the right-hand margin in large numbers and in line with the center of the equation.

Abbreviations

For commonly used terms, consult the *CBE Style Manual*. Abbreviate units of measure only when used with numerals. Do not use abbreviations in the title. Normally, numbers less than 10 should be spelled out, e.g. six.

Paragraphs

If paragraphs are to be numbered, designate by Arabic numerals. Designate sub-paragraphs by lower case letters in parentheses.

ILLUSTRATIONS

Either original drawings or clean, glossy photographs are acceptable for illustrations. An illustration or group of them should be planned to fit, after reduction, into a space 90 mm wide (one column) or 183 mm wide (two columns). The original should be not more than three times the size of final figure. For identification, the figure number and author's name should be written on the lower left corner with soft pencil.

Line drawings should be carefully made in India ink on white drawing paper or tracing paper. Letters, numerals, labels and axis captions should be made in capital size with a stencil or lettering set, not type-written. Letters and numerals must be at least $1\frac{1}{2}$ mm high and preferably 2 mm high in final form. Curves on graphs must be 0.3 mm wide after reduction. Axes and grid lines should be clearly visible but inconspicuous; a width of 0.2 mm after reduction is suggested. Figure numbers and captions should be typed on a separate page, not on the original illustrations. When a paper is submitted for publication, the original illustrations need not be provided so long as the copies are of such quality that reviewers can understand them. Original drawings must be provided when the paper is accepted for publication.

DISCUSSIONS

Discussions may be submitted on any paper or technical note published in the Journal for a period of not more than four months following publication. Discussion of a paper or technical note is open to anyone who has significant comments or questions about the content of the paper/technical note. A discussion will not be accepted for publication if it contains material readily found elsewhere, is purely speculative, introduces personalities or otherwise falls below the standards of a technical paper in a professional journal. Authors will be given an opportunity to reply to discussions.

The format for discussions differs from those of papers in that figures are to be identified by capital letters to avoid confusion with the original paper. The discussor should refer to himself as "the writer" or "I" and to the author of the original paper as "the author." The first page shows the title of the original paper with a footnote to identify the author, volume, page and date. Name and address of the writer of the discussion follow the title.

Discussions will be reviewed by the Editorial Board and possibly the reviewers of the original paper. The length of a discussion is restricted to one journal page. Lengthy discussions will be returned for shortening, or the writer may be encouraged to submit a paper or technical note.
